Abstracts

The global CeFeB Magnet market size is expected to reach \$ 1006 million by 2032, rising at a market growth of 8.3% CAGR during the forecast period (2026-2032). CeFeB magnet is a rare-earth permanent magnet in which cerium (Ce) partially substitutes neodymium or praseodymium in the NdFeB magnet system. By incorporating abundant and low-cost cerium, CeFeB magnets aim to reduce material costs while maintaining acceptable magnetic performance. They can be manufactured through sintering, bonding, or hot-deformation processes. Although their magnetic properties are generally lower than those of conventional high-end NdFeB magnets, CeFeB magnets offer a favorable balance between cost and performance, making them suitable for motors, household appliances, consumer electronics, and other cost-sensitive industrial applications.

In 2025, global production of CeFeB magnets reached 34,100 tons, with an average selling price of US\$16.8 per kilogram. Typical single-line production capacity is approximately 1,000-5,000 tons, and the industry's gross profit margin is approximately 15%-25%. Cost structure: direct materials account for approximately 78%, manufacturing costs account for approximately 17%, and labor costs account for approximately 5%. Industry chain: upstream consists of rare earth mining and separation, and rare earth alloy and powder suppliers; downstream consists of manufacturers of motors, automobiles, home appliances, consumer electronics, and magnetic components.

This report studies the global CeFeB Magnet production, demand, key manufacturers, and key regions.
