Abstracts

According to our (Global Info Research) latest study, the global Cefixime market size was valued at US\$ 139 million in 2025 and is forecast to a readjusted size of US\$ 191 million by 2032 with a CAGR of 4.7% during review period.

Cefixime API refers to the active pharmaceutical ingredient used in the manufacture of cefixime preparations. Classified as a third-generation oral cephalosporin antibiotic, it exerts its antibacterial effect primarily by inhibiting bacterial cell wall synthesis. The appearance is white powder, CAS number is 79350-37-1, and the molecular formula is C₁₆H₁₅N₅O₇S₂. Antibacterial activity was demonstrated by inhibiting the synthesis of bacterial cell walls.

The Cefixime API market is a mature segment within the oral cephalosporin API sector. Downstream, it is primarily utilized in the manufacture of oral dosage forms—such as capsules, tablets, granules, and dry suspensions—and is clinically prescribed for the treatment of respiratory tract infections, urinary tract infections, biliary tract infections, otitis media, sinusitis, and other conditions caused by susceptible bacteria. Demand is driven predominantly by the production of generic formulations, including Cefixime tablets, capsules, granules, and dry suspensions. Given the product's long history of clinical application, overall demand remains relatively stable; however, future growth potential is limited, driven primarily by the demand for anti-infective drugs in developing nations, usage in primary healthcare settings, the demand for pediatric dry suspensions, and the export of generic drugs. On the supply side, the market is dominated by manufacturers in India and China, with India accounting for a significant share of international exports. Within China, companies such as Qilu Pharmaceutical and Luoxin Pharmaceutical have established Cefixime as a key product in their oral API portfolios, while others—including Apelo Pharmaceutical and Guangzhou Pharmaceutical—also

possess a solid foundation in the Cefixime API business. In terms of the competitive landscape, market entry barriers are primarily defined by the requirement for dedicated production lines for cephalosporin β -lactams, comprehensive GMP/CEP/DMF registration documentation, rigorous impurity control, effective environmental waste treatment capabilities, and a proven capacity for stable supply. Price competition is pronounced; while standard-grade, low-end products yield relatively thin profit margins, companies possessing CEPs, USDMFs, export registrations, or specialized specifications (such as micronized or compacted forms) are better positioned to secure higher-value orders. Regarding product form, Cefixime trihydrate remains the dominant commercial variant. Overall, the Cefixime API market is not a high-growth emerging sector, but rather a mature antibiotic API market characterized by stable existing volume, price sensitivity, and a moderately high degree of supply concentration. Future growth is expected to stem primarily from the volume expansion of generic drugs in emerging markets, the broadening scope of export registrations, and the replacement of small-scale, low-end production capacities with high-quality, compliant manufacturing facilities.
