Abstracts

The global Ceflosulan Tazobactam Sodium market size is expected to reach \$ 424 million by 2032, rising at a market growth of 15.0% CAGR during the forecast period (2026-2032).

Ceflosulan and Tazobactam Sodium is a compound broad-spectrum antibiotic, composed of ceflosulan sulfate and tazobactam sodium in a fixed ratio. Among them, ceflosulan is the main antibacterial active ingredient, and tazobactam sodium is a β -lactamase inhibitor. As a compound preparation of cephalosporins and enzyme inhibitors, its core mechanism of action is as follows: ceflosulan exerts a bactericidal effect by inhibiting the synthesis of bacterial cell walls, and has strong antibacterial activity against a variety of Gram-positive bacteria and Gram-negative bacteria (especially *Pseudomonas aeruginosa*); tazobactam sodium can irreversibly bind to β -lactamase produced by bacteria, protect the β -lactam ring of ceflosulan from hydrolysis and destruction, thereby enhancing the antibacterial effect of ceflosulan against enzyme-producing drug-resistant bacteria and expanding the antibacterial spectrum. Clinically, this drug is mainly used for the treatment of moderate to severe infections caused by susceptible bacteria, such as pneumonia, urinary tract infections, abdominal infections, etc., and is an important drug with both efficacy and safety in clinical anti-infective treatment. In 2025, global Ceflosulan and Tazobactam Sodium production reached approximately 18.5 million vials.

As a new type of compound antibacterial drug, Ceflosulan and Tazobactam Sodium occupies an important position in the anti-infective drug market by virtue of its unique pharmacological advantages. Belonging to a cephalosporin compound preparation, this drug exerts significant curative effect on multi-drug resistant bacterial infections through the synergistic effect of ceflosulan and tazobactam. It shows good antibacterial activity

especially against clinically common pathogens such as drug-resistant *Pseudomonas aeruginosa* and extended-spectrum β -lactamase-producing Enterobacteriaceae, filling part of the gap in the field of treating drug-resistant bacterial infections. With a wide range of clinical application scenarios, it can be used for the treatment of various moderate to severe infections, has been highly recognized in the clinical field, and has been included in the recommended drugs of many authoritative diagnosis and treatment guidelines. At present, with the increasing prominence of bacterial resistance, the clinical demand for new, efficient and safe anti-infective drugs continues to rise, providing a good opportunity for the market development of Ceflosulan and Tazobactam Sodium. At the same time, the market competition pattern is constantly evolving, with both original research enterprises laying out and domestic pharmaceutical companies gradually entering the relevant fields. The industry as a whole shows a steady development trend, and its market potential will be further released with the continuous expansion of clinical applications.
