Abstracts

A ceiling fan is a mechanical fan, usually electrically powered, suspended from the ceiling of a room that uses hub-mounted rotating paddles to circulate air.

A ceiling fan rotates much more slowly than an electric desk fan; it cools people effectively by introducing slow movement into the otherwise still, hot air of a room, inducing evaporative cooling. Fans never actually cool air, unlike air-conditioning equipment, but use significantly less power (cooling air is thermodynamically expensive). Conversely, a ceiling fan can also be used to reduce the stratification of warm air in a room by forcing it down to affect both occupants' sensations and thermostat readings, thereby improving climate control energy efficiency.

Scope of the Report:

This report focuses on the Ceiling Fans in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.
For industry structure analysis, the Ceiling Fans industry is fragmented. A variety of manufacturers ranging from large multinational corporations to small privately owned companies compete in this industry. The top ten producers account for about 36.34% of the revenue market. Regionally, China is the biggest production area of Ceiling Fans. The worldwide market for Ceiling Fans is expected to grow at a CAGR of roughly 2.3% over the next five years, will reach 4410 million US$ in 2023, from 3850 million US$ in 2017, according to a new GIR (Global Info Research) study.
