## Abstracts

According to our (Global Info Research) latest study, the global Ceiling Light Controller market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The dome light controller is a device used to control the lights on the top of the car. It can automatically or manually adjust the brightness, color, mode, etc. of the dome light according to different driving scenarios and passenger needs. The structure of the dome light controller is generally composed of a controller body and one or more sensors. Its working principle is to judge the current driving status and passengers by receiving signals from the sensors, such as vehicle speed, light, temperature, humidity, sound, etc. Intent, and then send corresponding control instructions to the dome light through the controller body to change the output parameters of the dome light, such as voltage, current, frequency, etc. There are many functions of the dome light controller, such as: automatic identification control: the dome light controller can automatically adjust the brightness and color of the dome light according to different driving scenarios, such as day, night, rain, snow, etc., to improve driving safety and comfort sex. Gesture recognition control: The dome light controller can manually adjust the brightness and color of the dome light according to passenger gestures, such as waving, clapping, nodding, etc., to meet the individual needs of passengers. Intelligent networking control: the dome light controller can perform data interaction and remote control with other smart devices, such as mobile phones, tablets, audio, etc., through wireless networks, such as Bluetooth, WIFI, etc., to achieve more functions and services.
