When we are upgrading our surround sound, ceiling speakers and in-wall speakers are both great choices. They allow we to create a one-of-a-kind, room-flooding surround sound experience in a single room or even in multiple rooms. Ceiling speakers are typically circular-shaped speakers that are created to fit nested into our ceiling. Ceilings are great places to put speakers. Ceiling speakers can be used in one room or multiple rooms. They can be used to create traveling, fluid sound throughout many rooms, such as background music at a big party. In-wall speakers are rectangular-shaped speakers that are placed on the inside of your walls. They can serve as our left and right speaker channels, as additional front and rear speakers, or as continuous sound throughout multiple rooms. In-wall speakers are larger than ceiling speakers. They are horizontal-firing, which allows the sound to travel across the room, as opposed to down from the ceiling like in-ceiling speakers.
