Celecoxib capsules (patent brand name: CELEBREX), is a new generation of non-steroidal anti-inflammatory and analgesic drugs, mainly through the selective inhibition of coX-2 (COX-2) to inhibit the production of prostaglandins, achieve anti-inflammatory and analgesic effects.

The drug is used to relieve symptoms and signs of osteoarthritis and rheumatoid arthritis in adults and has fewer gastrointestinal side effects than traditional non-steroidal anti-inflammatory drugs.

The prevalence of osteoarthritis is 17 percent among people aged 40, 62 percent among people over 60 and 80 percent among people over 75.

The number of patients with arthritis in mainland China is more than 10% of the total population, well over 100 million, and the incidence of arthritis increases with age, and the number of patients is still increasing.

At present, the burden of chronic diseases will increase by 40% due to the aging of the population.

As the population ages, anti-inflammatory and anti-rheumatic drugs will enter a phase of rapid growth.

Globally, whether prescription drugs or non-prescription drugs, Xibu is widely used in clinical practice.
