Abstracts

According to our (Global Info Research) latest study, the global Cell-Based Label Free Monitoring market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Cell signaling is a transmission of molecular signals between the cells. Cells often receive many signals from the surrounding cells to ensure an appropriate response. Classical biochemical assays are used to quantify the signaling responses between the cells. However, in some instances, due to complex signaling pathways between the cells, few signal pathways may be overlooked during the testing process. Furthermore, lack of knowledge about orphan receptors cell signaling pathways is also inhibiting the drug discovery process. To overcome these companies developed label-free technologies that can understand the interactions between the cells by measuring cellular response. Previously, traditional cell-based label technologies are commonly used to screen new drugs for various therapeutic areas. However, undesirable results, need of tags, dyes and compromise screening are forcing companies to develop cell-based label free monitoring technologies. Owing to its high sensitivity, less complex process, and cost-effectiveness in drug discovery process cell-based label-free technologies are gaining traction over the years. Furthermore, they are used to understand the complex signaling pathways, quantify the affinity between cells and drugs, and to access difficult target classes.

Lack of various drugs to treat complex disease condition such as sickle cell anemia, and Crohn's disease, among others and an increase in investments of various companies and academic institutes to develop novel drugs for various therapeutic areas have a positive impact on the cell-based label-free monitoring market. Furthermore, companies

are looking for advanced screening technologies that can screen a large number of molecules with high sensitivity to decrease the time for drug development process are fueling the growth of the market over the forecast period.
