The global Cell Characterization Tests market size is expected to reach \$ 2030.5 million by 2029, rising at a market growth of 4.3% CAGR during the forecast period (2023-2029).

The global medical device market is estimated to be US\$603.3 billion in 2023, with a compound annual growth rate of 5% expected in the next six years. Global health care expenditure currently accounts for approximately 10% of global GDP, and the proportion will continue to increase in the next few years. This is primarily due to the increasing demand for healthcare from an aging population, the rising prevalence of chronic and infectious diseases, and the expansion of emerging markets. The medical device market plays an important role in the healthcare spending industry. The medical device market is driven by a variety of factors, including increasing global demand for advanced medical services, advancements in medical technology, growing geriatric population, increasing medical expenditures, and increasing awareness of early stage disease diagnosis and treatment.

Verifying the identity and purity of human cell lines is essential to the integrity of research activities. Companies in the cell line authentication and characterization tests market are increasing R&D in human cell authentication assays that identify short term repeat (STR) markers. Stakeholders in the cell line authentication and characterization tests market are making use of multiplex polymerase chain reaction (PCR) to simultaneously amplify the amelogenin gene and some of the most informative polymorphic markers in the human genome.
