Cell controller is a dedicated control system for manufacturing and industrial automation, used to manage the operation of multiple machines or processes within a production cell. A production unit is a group of machines or processes that work together to produce specific products or components. The unit controller is responsible for coordinating the operation of all machines and processes within the production unit, ensuring that each machine works properly, and ensuring that the entire process runs efficiently. It can control a range of functions, including machine operation, material handling, and quality control. Unit controllers typically use a combination of hardware and software components to manage production units. It can include sensors and other input devices to monitor the condition of machines and processes, as well as control devices such as programmable logic controllers (PLCs) to manage the operation of individual machines.
