Abstracts

According to our (Global Info Research) latest study, the global Cell Culture Cryoware market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Cryowares are cryogenic lab consumables and play a major role in cryopreservation of cell cultures. These Cryowares includes storage vials, tubes, vial canes along with associated tags, labels and markers, racks, boxes and coolers. Cryopreservation is where the cell culture is freeze and stored at an extremely low temperature. Once the cell culture is ready, these samples are added with cryoprotective solution and added to labeled storage vials which are cooled at a set rate. The cooling temperature is important as dehydration of cells is controlled by placing the vials in a liquid nitrogen freezer. When the cell culture mixture is then thawed and processed whenever required.

The demand for cell culture cryowares is expected to propel as there has been an increase in stem cell research funding and new technologies. Moreover, there has been a shift towards bioengineered products where medical experts are opting more of these procedures. Industry participants are introducing new products to offer multiple automated controls and freezing profiles.
