Cell Culture Media are used to provide nutrients for cells growth in research, diagnostic and manufacturing applications. Typical cell culture media contain a mixture of defined nutrients dissolved in a buffered physiological saline solution. In cell culture, media are used to facilitate the growth of cells. Media are water-based liquids that can be provided in liquid or in dry powder format. Dry powder media has to be hydrated with water or with process liquids. Process liquids are water-based buffers and saline solutions which facilitate the cell culture process and ensure that the cell culture environment remains at a constant pH.
