According to our (Global Info Research) latest study, the global Cell Cultured Fat market size was valued at US\$ 281 million in 2025 and is forecast to a readjusted size of US\$ 595 million by 2032 with a CAGR of 10.6% during review period.

In 2025, the global sales volume of cultivated fat reached 13,000 metric tons, with an average price of approximately \$21,000 per ton.

Cultivated fat is a fat product generated through the proliferation and differentiation of animal adipocytes or precursor cells in culture media and bioreactors. It can be combined with plant proteins, muscle cells, or food matrices to enhance the aroma release, mouthfeel (oiliness), juiciness, and authentic meaty flavor of meat alternative products. The upstream sector primarily involves cell lines, culture media, bioreactors, scaffold materials, and food-grade separation and purification technologies, while downstream applications mainly target hybrid plant-based meat, cultivated meat, pet food, and high-end foodservice channels.
