## Abstracts

Cell harvesting usually for use in cancer or other treatment. Usually the cells are removed from the patient's own bone marrow. Stem cells can be harvested from the blood or bone marrow. Umbilical cords have been saved as a future source of stem cells for the baby.

Scope of the Report:

This report focuses on the Cell Harvesting in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

By region, the global cell harvesting market is segmented into North America, Europe, Asia Pacific, and the Rest of the World (RoW). While North America held the largest share of the market in 2017, Asia Pacific is expected to register the highest CAGR during the forecast period. As increasing R&D expenditure helps in the development of new treatment solutions, supportive government policies for stem cell research and increasing public-private initiatives to encourage public adoption of stem cell-based treatment in the Asia Pacific countries are driving the growth of the market in this region.

The potential use of stem cells in regenerative medicine, such as in case of cancer, trauma, congenital diseases, etc., is also one of the factors contributing to the demand for stem cells for research, thereby contributing toward growth of cell harvesting system market across the globe. The rising prevalence of certain diseases such as cancer is expected to drive the growth of this market over the forecast period.

The worldwide market for Cell Harvesting is expected to grow at a CAGR of roughly 8.4% over the next five years, will reach 330 million US\$ in 2023, from 210 million US\$ in 2017, according to a new GIR (Global Info Research) study.
