According to our (Global Info Research) latest study, the global Cell Line Engineering Services market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Cell line engineering services is a biotechnology service that utilizes gene editing and cell culture technologies to edit and modify cells for various research and application needs. In this service, professional scientists design suitable gene editing schemes based on the customer's requirements and use gene editing tools such as CRISPR/Cas9 to precisely modify, insert, or delete the target gene sequence. Through specific cell culture techniques, the modified cells can obtain superior phenotypes and characteristics, such as higher product yield, better growth characteristics, and higher immune response.

Cell line engineering services are mainly applied in the field of biomedicine, such as drug screening, immunotherapy, gene therapy, etc. Furthermore, since this technology can be applied to various types of cells and animal and plant cells, it can also be applied in fields such as food and agriculture, such as improving the disease resistance of some plants and improving the quality of certain meat products.
