Abstracts

Cell signaling (cell signalling in British English) is part of any communication process that governs basic activities of cells and coordinates all cell actions. The ability of cells to perceive and correctly respond to their microenvironment is the basis of development, tissue repair, and immunity, as well as normal tissue homeostasis. Errors in signaling interactions and cellular information processing are responsible for diseases such as cancer, autoimmunity, and diabetes. By understanding cell signaling, diseases may be treated more effectively and, theoretically, artificial tissues may be created.

Scope of the Report:

This report focuses on the Cell Signaling in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The cell signaling consumables segment is estimated to account for the largest share of the cell signaling market in 2017. The increasing number of cell signaling research activities and rising incidence of chronic diseases are some of the major factors contributing to the segments large market share.

The worldwide market for Cell Signaling is expected to grow at a CAGR of roughly 6.8% over the next five years, will reach 3750 million US\$ in 2023, from 2530 million US\$ in 2017, according to a new GIR (Global Info Research) study.
