Abstracts

The global Cellophane market size is expected to reach \$ 547 million by 2032, rising at a market growth of 3.6% CAGR during the forecast period (2026-2032).

Cellophane is a thin, transparent sheet made of regenerated cellulose. Its low permeability to air, oils, greases, bacteria, and water makes it useful for food packaging. In 2025, global cellophane production reached 71,000 tons, with an average selling price of USD 5,800 per ton.

The driving forces behind the Cellophane market primarily stem from increasing environmental awareness and the growing demand for sustainable development. As global concerns over plastic pollution intensify, regenerated cellulose film, as a biodegradable and eco-friendly material, has gained significant favor. Additionally, stringent environmental regulations and policies are pushing companies to adopt greener alternatives, particularly in sectors such as packaging, food, and pharmaceuticals. Consumer preference for green products and brand owners' pursuit of sustainable packaging further fuel market demand.

In terms of market trends, technological innovation and product performance optimization are key directions. Companies are focusing on enhancing the strength, transparency, and barrier properties of regenerated cellulose films to meet diverse application needs. Meanwhile, the rise of the circular economy and recycling is driving the expanded use of regenerated cellulose films in closed-loop supply chains. Regionally, the Asia-Pacific market is emerging as a major growth engine due to rapidly increasing packaging demand and the promotion of environmental policies. Looking ahead, with technological advancements and the deepening of environmental regulations, the regenerated cellulose film market is poised for continued expansion.
