## Abstracts

The cellular service providers demand for intelligent networks and support systems to optimize the network usage. This demand is attributed to the noteworthy expansion of cellular network coverage and rising demand for data access across the globe. In addition, system complexity is further supporting the demand for intelligent networks to optimize the cellular capacity and coverage. In order to optimize the cellular networks, mobile operators have several options such as deployment of small cells, carrier WiFi, self organizing networks and cloud-RAN (Radio Access Network). These technologies are capable of enabling the cellular service providers with unique solutions to solve complexities and optimize the cellular networks.
