According to our (Global Info Research) latest study, the global Cellular Routers and Cellular Gateways market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Cellular routers connect to carrier networks and then use the acquired signals to securely route data between connected LAN devices and endpoints such as enterprise data centers. It allows enterprises or government entities to provide data connectivity virtually anywhere while extending enterprise security to edge solutions. Cellular gateways often act as "aggregators" and converters of device data. For example, a gateway can collect data from dozens of field devices and convert the data into IP protocol before sending it over a cellular network. Therefore, the most important function of a cellular gateway is protocol conversion. The gateway can receive protocols such as Zigbee, WiredHART or Modbus and convert the data into a format that can be easily sent over the wireless network.
