According to our (Global Info Research) latest study, the global Cellulose Casings market size was valued at USD 631.8 million in 2023 and is forecast to a readjusted size of USD 963.9 million by 2030 with a CAGR of 6.2% during review period.

Cellulose, usually from cotton linters or wood pulp, is processed to make viscose, which is then extruded into clear, tough casings for making wieners and franks. They also are shirred for easier use and can be treated with dye to make 'red hots'. The casing is peeled off after cooking, resulting in 'skinless' franks. Cellulosic viscose solutions are combined with wood or for example abaca pulp to make large diameter fibrous casings for bologna, cotto salami, smoked ham and other products sliced for sandwiches. This type is also permeable to smoke and water vapor. They can be flat or shirred, depending on application, and can be pretreated with smoke, caramel color, or other surface treatments.

The Global Info Research report includes an overview of the development of the Cellulose Casings industry chain, the market status of Non-Edible (Natural, Artificial), Edible (Natural, Artificial), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Cellulose Casings.
