The global Cellulose Ether for Building Material market size is expected to reach \$ 3074.8 million by 2029, rising at a market growth of 6.5% CAGR during the forecast period (2023-2029).

The market of fiber cellulose for building materials has been on a growth trend and is expected to continue to maintain a steady growth in the next few years. The following are the main trends of the fiber cellulose market site for building materials: 1. Increasing awareness of environmental protection: The sustainability and environmental protection of the construction industry has become an issue that cannot be ignored, so more and more construction companies choose to use environmentally friendly buildings Material. Cellulose is a natural and environmentally friendly material that meets the requirements of the construction industry for environmental protection. 2. The steady growth of the construction industry: With the development of the global economy and the steady improvement of people's living standards, the demand for the construction industry is also increasing. The growth of the construction industry has promoted the use of cellulosic alcohol for building materials. 3. Development of new building materials: With the emergence of new technologies and materials, new building materials are on the rise. Among these new building materials, some have the characteristics of fiber texture, such as high temperature light transmittance and good three-dimensionality, etc. Habits and requirements are not changing, and building materials are required to have higher performance and better product quality. The product quality and performance of cellulose for building materials are also constantly improving, which can meet the needs of construction companies. 5. Regional market differentiation: The demand and usage habits of the fiber felt market for building materials also vary in different regions. For example, in the North American and European markets, textile retinol for building materials has been widely used, while in the Asian market it is still in its infancy. This

means that on a global scale, there is still a lot of room for growth in the synthetic fiber market for building materials.

Cellulose ether is an important building material additive, which is widely used in water, gypsum, lime and other building materials. It has the characteristics of high water solubility and good stability. The fiber raw material can effectively increase the fluidity of the material and make the material easier to apply, thereby improving the application efficiency. Cellulose alcohol is a very important additive in building materials, it can provide high performance of building materials enough to provide better support for building products.
