According to our (Global Info Research) latest study, the global Cellulosic Fibre market size was valued at USD 74040 million in 2023 and is forecast to a readjusted size of USD 87940 million by 2030 with a CAGR of 2.5% during review period.

Cellulosic Fibres are fibers obtained from the bark, wood or leaves of plants, or from plant-based material. Cellulose fibers include natural cellulose fibers and man-made cellulose fibers. And in the report, the statistics are related to Cotton, Jute, Viscose, Lyocell, Modal and others.

Cellulose fibers have a wide range of applications. Cellulose fibers are used in apparel, home textile. With the increasing of global population and dispensable income, growing demand for apparel and home textile has driven the growth of global cellulose fibers market. The demand for cellulose fibers is expected to continue increasing during the remaining years of the forecast period of 2021-2028. Cellulose fibers industry will usher in a stable growth space.

Increasing demand for eco-friendly and biodegradable fibers, especially in textile and hygiene industry is driving the cellulose fibers market. The production of synthetic or man-made fibers includes the industrial processing of wood pulp derived from botanical sources. However, the manufacturing of cellulose fibers entails mechanical and chemical processing of wood pulp. Viscose, triacetate, and acetate are the most common variants of rayon, which are man-made cellulose fibers used extensively across end-use industries.
