Cement defoamer is a chemical additive specially used to eliminate or suppress the foam generated during the cementing process. In oil drilling and cementing operations, a large amount of foam is often generated during the preparation and pumping of cement slurry, which will affect the fluidity and stability of cement slurry, and then affect the quality and effect of cementing. According to the chemical composition and usage characteristics, cement defoamers can be divided into many types such as silicone defoamers, polyether defoamers, mineral oil defoamers, etc. These defoamers are widely used in many fields such as oil drilling, geological exploration and natural gas extraction to improve the quality and effect of cementing.
