The mortar mixing pump is driven by an electric motor, and the main pumping system adopts an open oil circuit, constant power control, and has the dual functions of hydraulic stepless adjustment and manual adjustment of the mortar delivery volume. The stirring system stirs the raw materials into a pumpable shotcrete, which is loaded into the hopper, which can be used as a filler auxiliary device and storage for the pumpable shotcrete transfer pump. The mortar transfer pump consists of two parallel pump cylinders.

With the development of the national economy, the increase in industrial investment and supporting investment in water conservancy and municipal management, and industrial upgrading, industry demand is expected to increase steadily. Judging from the development plans of major downstream industries, downstream demand mainly involves new investment and technological transformation, such as focusing on the development of key equipment such as pumps and valves for special purposes, and research on new high-efficiency energy-saving water pumps and other energy-saving technologies.
