## Abstracts

The global Cement-Sodium Silicate Grouts market size is expected to reach \$ 796 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

Cement–sodium silicate grouts are commonly implemented as two-component (A+B) grouting systems, where Component A is a cementitious slurry (often cement + water, sometimes with bentonite and rheology/retarding admixtures) and Component B is an accelerating solution that is frequently silicate-based (water glass). In 2025, global Cement–Sodium Silicate Grouts sales is estimated at approximately 3,500 kilotons, with an average ex-works price of about USD 160 per ton, while global installed production capacity is estimated at roughly 6,000 kilotons per year and the industry gross margin typically ranges from 18% to 28%.

Upstream inputs include cement/mineral fines (and sometimes bentonite), admixtures and sodium silicate (water glass); midstream players formulate and manufacture A-component cementitious slurries plus B-component accelerators; downstream consumption is driven by TBM backfilling systems and grouting contractors across metro/utility tunnels, underground works, mining and water-related ground treatment.

This report studies the global Cement-Sodium Silicate Grouts production, demand, key manufacturers, and key regions.
