Abstracts

The global Cementitious Grout market size is expected to reach \$ 514 million by 2032, rising at a market growth of 3.7% CAGR during the forecast period (2026-2032).

Cementitious Grout is a dry powder material primarily composed of cement, with added mineral fillers, pigments, and polymer additives. It is used to fill gaps between tiles, stones, and other materials, offering adhesive properties, a certain degree of water resistance, and wear resistance. It is easy to apply and is an upgraded product compared to traditional white cement. The upstream supply chain mainly relies on basic building materials including high-grade white cement or Portland cement, fine quartz sand, and various high-performance additives. Global sales are projected to reach approximately 476,000 tons in 2025, with an average market price of approximately US\$802 per ton. The industry's gross profit margin is in the range of 15%-30%.

The Cementitious Grout industry is steadily developing alongside the renewal of existing buildings and the increasing demand for high-quality renovations in the construction market. The core driving force behind market growth stems from consumers' heightened awareness of the aesthetics and health aspects of their living environments, which directly fuels the demand for high-end functional products that are mold-resistant, stain-resistant, and available in a wide range of colors. Simultaneously, the national push for green building and prefabricated construction is also bringing new opportunities to the industry through updated regulations and standards.

This report studies the global Cementitious Grout production, demand, key manufacturers, and key regions.
