The global Cementitious Tile Grout market size is expected to reach \$ 1827 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032). Cement-based tile grout is a building material composed of cement, sand, and additives. It is used to fill the gaps between ceramic, porcelain, or stone tiles, providing structural integrity, moisture resistance, and aesthetic appeal to the paved surface. It is widely used in residential, commercial, and industrial applications. The cement-based tile grout industry chain includes upstream suppliers of cement, fine aggregates, chemical additives, pigments, and packaging materials; midstream manufacturers handle batching, grinding, and packaging to ensure performance, flowability, and color stability; and downstream applications encompass building contractors, tile installers, real estate developers, and the home improvement market. Supporting services include technical guidance, construction training, and quality testing. In 2025, global production of cement-based tile grout was approximately 300,000 tons, with a global average market price of approximately US\$4,200 per ton. The gross profit margin of major companies in the industry ranged from 25% to 45%. In 2025, global production capacity of cement-based tile grout was approximately 375,000 tons.

The Cementitious Tile Grout market is driven by global construction activity, increasing demand for durable and aesthetically pleasing tiled surfaces, and urbanization. Innovations in additives enhance water resistance, color stability, and ease of application, supporting contractor efficiency. Growth in residential, commercial, and industrial building projects, along with DIY home improvement trends, fuels market expansion. Manufacturers focus on product quality, consistency, and technical support to maintain competitiveness.
