According to our (Global Info Research) latest study, the global Cementitious Waterproofing market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Waterproofing can be explained as the process of making a structure or object waterproof or water-resistant so as to make it unaffected by water under specified conditions such as high moisture areas, internal seepages, rains etc. Only effective waterproofing can resist the inflow of water. The waterproofing materials have got to be used in wet environment as well as under water and hence need to be of specific composition and good quality. Cementitious waterproofing are being utilized in building structures (such as decks or wet spots), watercraft, canvas, electronic devices and paper packaging. Cementitious waterproofing provides a high bond strength to both steel and cement. Cementitious waterproofing guarantees concrete in sulphate contaminated ground conditions. It is useful for inside and outside waterproofing of concrete and other mineral substrates. Cementitious waterproofing is profitable for underground structures and furthermore on housetops and decks. The cementitious covering can shield interstates and beachfront structures from chloride and enhance the quality of the sustained bond.

According to the Japan Cement Association, Japan's cement industry emitted about 40 million tons of carbon dioxide in 2020. And the cement industry became the fourth largest source of carbon dioxide emissions in the industrial sector after electricity, steel and chemicals. 60% of the cement industry's carbon emissions come from process emissions, 35% from combustion emissions and 5% from indirect emissions from electricity. According to our "Building Materials Research Institute", the global clinker

capacity in 2022 was about 3.55 billion tons, and the global cement production was about 4.0 billion tons. According to the National Bureau of Statistics, China's cumulative cement output reached 2.118 billion tons in 2022.
