According to our (Global Info Research) latest study, the global CEMS Dust Monitors market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Continuous Emissions Monitoring Systems (CEMS) consist of a series of gas analyzers for various air pollutants being monitored. Dust Monitor uses the light transmission technique to measure the visible opacity of exhaust gas in a duct, stack, or flue, in which a high-intensity light beam is projected across the stack. Any dust, smoke, or particulate present will attenuate the transmitted light, and the decrease in light intensity, due to absorption and scattering, is measured.
