According to our (Global Info Research) latest study, the global CEMS Emission Monitoring System market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The CEMS Emission Monitoring System is a system for real-time monitoring and recording of industrial emissions. It is designed to help industrial companies ensure that their emissions (such as gases, particulate matter and other pollutants) are within legal standards and provide accurate emission data for environmental monitoring and reporting. The main purpose of the CEMS emission monitoring system is to ensure that the emissions of industrial enterprises are controlled within the legal limits, so as to reduce the negative impact on the environment and public health. By monitoring and recording emission data in real time, the CEMS system can provide accurate emission information, help companies comply with environmental regulations, evaluate and improve environmental protection measures, and provide emission reports and compliance certificates to regulatory agencies.
