The global Center-Split Frequency Conversion Asynchronous Door Machine market size is expected to reach \$ 680 million by 2032, rising at a market growth of 3.0% CAGR during the forecast period (2026-2032).

In 2025, the production volume of center-opening variable-frequency asynchronous door operators is projected to reach 1.7975 million units, with an average selling price of \$300 per unit. The global annual production capacity for these operators stands at approximately 3 million units, with a gross margin of approximately 27.6%. The center-opening variable-frequency asynchronous door operator is a modern door control device widely utilized across various industrial and commercial settings?particularly in environments requiring rapid access and efficient operation. By integrating variable-frequency technology with the characteristics of asynchronous motors, it offers a highly efficient method of control. Upstream raw materials for these operators include rare earth permanent magnet materials, electronic components, sensors, and similar items. The midstream segment consists of the manufacturers of these door operators, while the downstream market primarily encompasses residential, commercial, and industrial applications.

The market for center-opening variable-frequency asynchronous door operators is currently exhibiting a trend of steady growth. As the elevator industry raises its standards regarding door operator performance, energy efficiency, and intelligence, these center-opening units?distinguished by their smooth operation, low noise levels, and superior energy-saving capabilities?have found widespread application across commercial, residential, and industrial elevator sectors. In terms of market competition, both domestic and international enterprises are significantly increasing their R&D

investments to launch products that offer enhanced functionality and greater adaptability; concurrently, industry concentration is gradually rising, with leading companies securing substantial market shares by leveraging their advantages in technology, branding, and scale. Nevertheless, the market also faces challenges such as accelerating technological iteration and mounting cost pressures, necessitating continuous innovation from enterprises to maintain their competitiveness.
