Central air conditioning terminal equipment refers to the terminal device connected to the central air conditioning system, which is responsible for distributing processed air to each room or area to ensure the comfort of the indoor environment. This type of equipment mainly includes fan coil units, air outlets, supply and return air ducts and other components. As the most common terminal equipment, fan coil units integrate small fans and heat exchangers, which can flexibly perform cooling or heating operations to meet the needs of different spaces. By adjusting the water flow or wind speed, precise control of indoor temperature can be achieved. While ensuring indoor comfort, central air conditioning terminal equipment also improves the operating efficiency and user experience of the entire air conditioning system.
