## Abstracts

The global Central Card Issuance Solution market size is expected to reach \$ 1813 million by 2032, rising at a market growth of 3.2% CAGR during the forecast period (2026-2032).

To address the problems of decentralized production, lengthy processes, difficult security management, and slow response to personalized needs in the production of physical cards and certificates across multiple scenarios, a centralized card issuance solution has emerged. With the expansion of organizational scale and the acceleration of digital transformation, this solution has evolved from early single physical card printing equipment to a centralized, automated card and certificate management platform integrating card design, data docking, batch printing, personalized writing (such as chip encoding), activation and distribution, and full lifecycle management. Currently, centralized card issuance solutions have developed to support various forms such as physical cards, virtual cards, and mobile credentials, deeply integrating the Internet of Things, artificial intelligence, and cloud management technologies. They are widely used in areas such as enterprise employee access control, campus smart cards, patient IDs in medical institutions, bank financial cards, membership identification, and government public services, enabling efficient, secure, and traceable digital management of the entire card and certificate process, significantly improving operational efficiency, security levels, and user experience.

As an infrastructure for financial technology and public services, the centralized card issuance solution is evolving towards digitalization, intelligence, and ecosystem integration. Future efforts should focus on security system upgrades (such as quantum encryption), cross-domain data integration (such as government-finance-commercial data interoperability), and precise matching of user needs (such as AI-recommended

card issuance), while also addressing challenges such as data privacy, regulatory compliance, and technological iteration. Through policy guidance, technological innovation, and industrial collaboration, the centralized card issuance solution will support financial inclusion, social governance, and high-quality development of the digital economy, becoming a 'digital link' connecting government, enterprises, and individuals.
