Abstracts

According to our (Global Info Research) latest study, the global Central Chemical Supply System (CCSS) market size was valued at US$ 1589 million in 2025 and is forecast to a readjusted size of US$ 2345 million by 2032 with a CAGR of 5.9% during review period.

Central Chemical Supply System (CCSS) is a system that continuously supplies chemicals to the production line. The chemicals supplied by the supply system are generally used in large quantities or supplied by multiple devices, and belong to long-distance transportation. They are not suitable for chemicals with low usage or limited storage time before use (usually requiring special packaging to transport them to the point of use). These chemicals are generally transported to areas such as wet etching and cleaning.

In 2025, the global sales of Central Chemical Supply System (CCSS) are expected to reach 3,126 units, with an average price of 494 K USD per unit and an industry gross profit margin of approximately 30%.

The global Central Chemical Supply System (CCSS) market is expected to expand steadily, driven by capacity additions in semiconductors, display panels, photovoltaics, and other high-cleanliness manufacturing industries. Semiconductor fabs represent the most important demand driver, as wet cleaning, wet etching, developing, stripping, and post-CMP cleaning processes require high-volume, high-purity, continuous, and contamination-controlled chemical delivery. As advanced fabs become larger and more automated, CCSS is evolving from a basic chemical delivery infrastructure into an integrated system featuring high-purity piping, automated dispensing, real-time

monitoring, leak detection, safety interlocks, precision flow control, and digital factory integration. According to SEMI, worldwide 300mm fab equipment spending is projected to rise by 18% to USD 133 billion in 2026 and by another 14% to USD 151 billion in 2027, supported by AI chip demand, advanced logic and memory investment, and regional semiconductor self-sufficiency programs. This fab expansion cycle is expected to create stronger demand for centralized, safe, and automated chemical supply solutions.
