According to our (Global Info Research) latest study, the global Central Loose Tube Type OPGW Cable market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Central tube type OPGW optical cable means that the optical fiber is loosely placed in a sealed, water-blocking stainless steel tube and filled with water-blocking cable paste. Under different environmental conditions, the steel tube provides protection for the optical fiber during work and insulation. The aluminum layer on the outside of the tube is optional. Stainless steel is located at the center of the cable and is protected by one or more layers of aluminum-clad steel and aluminum wrap wire. Aluminum-clad steel wire is distributed in a trapezoidal shape around the light body to create a compact structure. The wire provides mechanical strength to withstand harsh installation and operating conditions, and controls temperature rise to achieve conductivity when in the event of a short circuit. The central tube type OPGW optical cable is a type of power optical cable. It is characterized by small cable diameter, light weight, small short-circuit current capacity, and slightly poor tensile resistance, torsion resistance, and lateral pressure resistance.
