Abstracts

According to our (Global Info Research) latest study, the global Central Tube Optical Cable market size was valued at US$ 336 million in 2025 and is forecast to a readjusted size of US$ 432 million by 2032 with a CAGR of 3.1% during review period.

In 2025, the global production of central tube optical cables reached 545 million meters, with an average selling price of $0.6 per meter. The global annual production capacity of central tube optical cables is approximately 800 million meters, and the gross profit margin is about 21.6%. Central Tube Optical Cable is a type of fiber optic cable with a specific structure, typically used for long?distance optical signal transmission. Due to its excellent performance and structural design, central tube optical cables can effectively reduce mutual interference between optical fibers, thereby improving signal transmission stability and capacity. The upstream of central tube optical cables includes optical fibers, optical fiber preforms, and loose tube materials, among others. The midstream consists of central tube optical cable manufacturers, while the downstream mainly covers applications in the telecommunications, construction, and industrial sectors.

Currently, the market for central tube optical cables is in a mature and stable stage of development, playing a vital role in communication infrastructure such as long?haul backbone networks, metropolitan area networks, and access networks, owing to their simple structure, high manufacturing efficiency, and excellent transmission performance. With the ongoing global deployment of 5G networks, data centre interconnections, and fibre?to?the?home initiatives, demand for high?performance, high?capacity optical cables remains steadily growing. However, the industry also faces challenges including intense product homogenisation competition, fluctuating raw

material prices, and increasing cost?control pressure from downstream operators. Overall, the market continues to evolve toward higher transmission rates, smaller form factors, lower attenuation, and better environmental adaptability, with technological upgrading and product innovation serving as the core drivers of industry development.
