The global Centralized Monitoring Station market size is expected to reach \$ 4760 million by 2032, rising at a market growth of 7.0% CAGR during the forecast period (2026-2032).

A centralized monitoring station is a core monitoring terminal installed at hospital nursing stations, monitoring centers, or related clinical workstations to centrally receive, display, review, and manage vital signs, waveforms, alarms, and related monitoring data from multiple patients. It typically works with bedside monitors, telemetry devices, transport monitors, and hospital information systems, and functions as the central monitoring node, central station, or central nursing monitoring terminal within a patient monitoring system rather than as a general office display terminal.

The global production of centralized monitoring stations is projected to reach 780,000 units by 2025, with an average price of \$3,800 per unit.

This report studies the global Centralized Monitoring Station production, demand, key manufacturers, and key regions.
