Centrifugal duct fan is a fan commonly used in HVAC (heating, ventilation and air conditioning) systems. Its design purpose is to make air pass through the pipeline system. Its working principle is to use centrifugal force to generate high-speed air flow. The fan consists of a rotating impeller that draws air into the fan housing and then discharges it through a pipe. The impeller blades are curved, which causes the air to rotate and accelerate as it passes through the fan. Compared with other types of fans, centrifugal duct fans are famous for their high efficiency and relatively low noise level. They are often used in residential and commercial HVAC systems, as well as in industrial applications where air flow is required during drying, ventilation or material handling.
