Abstracts

The global Centrifugal Electrospinning market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Centrifugal ES is known by force spinning or rotary spinning as well. In this method, the electric field is replaced with a centrifugal force, which distinguishes centrifugal ES from conventional ES. Fiber formation is almost the same with conventional ES with a slight difference, instead of electric field, rotating speed surpasses the critical point to form a Taylor cone, and then the liquid jet gets ejected from the needle. Therefore, rotating speed is one of the key parameters that determines the quality of the fibers along with the nozzle configuration, collector type, temperature, etc.

This report studies the global Centrifugal Electrospinning production, demand, key manufacturers, and key regions.
