Centrifugal grinding and finishing machines are specialized equipment used for surface finishing, deburring, and polishing of workpieces by utilizing high-speed centrifugal force. These machines typically consist of a rotating drum or disc that creates a strong centrifugal effect, causing abrasive media and the workpieces to rub against each other. This process efficiently smooths, deburrs, or polishes various materials, including metals, plastics, and ceramics, with consistent results. Centrifugal machines are commonly used in manufacturing industries to achieve precise surface finishes on complex parts while reducing manual labor and processing time.
