Abstracts

According to our (Global Info Research) latest study, the global Centrifugal Nitrogen Compressor market size was valued at US\$ 328 million in 2025 and is forecast to a readjusted size of US\$ 453 million by 2032 with a CAGR of 4.7% during review period.

In 2025, global sales of centrifugal nitrogen compressor were approximately 580 units, with an average selling price of about USD 550,000 per unit at the manufacturer level. The gross margin of major industry manufacturers was approximately 22%–32%.

A centrifugal nitrogen compressor is a type of rotating equipment that uses nitrogen as the working medium. High-speed impellers impart kinetic energy to the nitrogen, which is subsequently converted into pressure energy by diffusers and volutes, thereby enabling continuous compression, boosting, or circulation of nitrogen. The equipment generally consists of the compressor casing, rotor, bearings, sealing system, drive system, cooling system, and control system. Its aerodynamic and mechanical design is tailored to specific requirements for nitrogen flow rate, inlet pressure, discharge pressure, purity, and operating stability. Centrifugal nitrogen compressors are characterized by high flow capacity, continuous operation, relatively low vibration, and the ability to maintain an oil-free gas path, making them suitable for long-term, stable operation under industrial gas service conditions.

The upstream supply chain of centrifugal nitrogen compressor primarily includes alloy steel, stainless steel, castings and forgings, impellers and rotors, bearings, dry gas seals or carbon ring seals, gearboxes, electric motors, steam turbines, heat exchangers, valves, and control instrumentation. Impeller aerodynamic design, rotor machining accuracy, sealing reliability, and anti-surge control directly affect overall

compressor performance. Downstream demand mainly comes from the compression and transportation of nitrogen produced by air separation units, as well as nitrogen circulation, inerting, purging, and process gas supply in petrochemical, coal chemical, metallurgical, electronic gas, LNG, and marine systems. Product selection, system integration, and project delivery are generally carried out jointly by compressor manufacturers, air separation equipment suppliers, engineering contractors, and end users.
