Centrifugal oil cleaner is an efficient oil processing device primarily used to remove impurities, moisture, and fine particles from oil, enhancing its purity and quality. Utilizing centrifugal force generated by high-speed rotation, it separates different components in the oil. In a Centrifugal Oil Cleaner, the oil to be treated is pumped into a rotating separation chamber. As the rotational speed increases, heavier impurities, moisture, and particles experience greater centrifugal force, causing them to be thrown towards the outer wall of the chamber and flow down along the wall, ultimately collected in a sediment container at the bottom. Lighter, purer oil continues to rotate and flows towards the central outlet, achieving oil purification. The Centrifugal Oil Cleaner boasts high processing capacity, high separation efficiency, simple operation, and easy maintenance, suitable for purifying various industrial oils, edible oils, and biodiesel. By using this device, enterprises can significantly reduce impurity content in oil, extend oil service life, improve product quality, and minimize environmental impact. The Centrifugal Oil Cleaner is a crucial device in modern oil processing and recycling fields.
