Abstracts

The global Centrifuge for Sugar Production market size is expected to reach \$ 663 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

The centrifuge for sugar production refers to a specialized centrifugal separation equipment used for refining sugarcane sugar, beet sugar, raw sugar, and separating sugar paste into honey. It mainly generates centrifugal force through high-speed rotation to separate the sugar crystals in the sugar paste from the mother liquor and molasses, achieving de honey, sugar washing, dehydration, and crystal recovery. Common products include intermittent sugar centrifuge, continuous sugar centrifuge, methyl sugar centrifuge, ethyl sugar centrifuge, propylene sugar centrifuge, white sugar centrifuge, and raw sugar centrifuge. In 2025, global Centrifuge for Sugar Production production reached approximately 3,854 Units, with an average global market price of around US\$ 123,697 per unit.

The centrifuge for sugar production is the core separation equipment in the sugar production line, and the demand mainly comes from the upgrading of old sugar factory equipment, automation transformation, energy conservation and consumption reduction, improvement of sugar product quality, and expansion of sugar factories in emerging markets. In the short term, global sugar production capacity growth is relatively stable, but major sugarcane producing regions such as India, Brazil, Southeast Asia, and Africa still have demand for updates. The European and Japanese markets are more inclined towards efficient, low-energy consumption, automatic control, and hygienic design. In the future, the focus of competition will be on continuous operation stability, low sugar loss, low energy consumption, automatic sugar washing, wear-resistant and corrosion-resistant materials, intelligent monitoring and maintenance convenience. Enterprises

with understanding of sugar production processes and experience in whole line matching are more likely to obtain orders.
