According to our (Global Info Research) latest study, the global Ceramic Ball Valve market size was valued at USD 97.8 million in 2023 and is forecast to a readjusted size of USD 126.3 million by 2030 with a CAGR of 3.7% during review period.

A ball valve is a device with a spherical closure unit that provides on/off control of flow. The sphere has a port, also known as a bore, through the center. When the valve is positioned such that the bore is aligned in the same direction as the pipeline, it is in open position and fluid can flow through it. When rotated 90 degrees, the bore becomes perpendicular to the flow path, meaning the valve is closed and the fluid cannot pass through.
