Abstracts

Medical-grade ceramics is a material that is widely used in applications such as the development of prosthetics, implants, medical tools and devices. Medical applications of ceramics include the repair or replace musculoskeletal hard human connective tissues. They also have clinical applications such as orthopedic implants, dental implants, and bone screws. Bioinerts and bioactive are the two leading families of bioceramics. All medical ceramics share the property of time-dependent kinetic alteration of the surface following implantation as one of their common characteristics. Additionally, it naturally develops a coating of biologically functional carbonate hydroxyapatite that acts as a strong bonding agent for living tissue.

According to our (Global Info Research) latest study, the global Ceramic Biomaterial Implant market size was valued at US\$ 24800 million in 2023 and is forecast to a readjusted size of USD 37770 million by 2030 with a CAGR of 6.1% during review period.

The increasing number of medical procedures due to rising incidences of chronic diseases is driving the market growth of medical ceramics. Different ceramic implants, such as dental implants, orthopedic implants, and implantable electronic devices, are available globally. Additionally, the increasing number of medical implants is another factor contributing to the market growth. Composite materials such as hydroxy appetite (HAP) and zirconia are the top investment pockets in the medical ceramics market. Furthermore, the rapid adoption of ceramics as a substitute for metals in hip and joint reconstruction boosts the market growth. The growing number of medical procedures results from factors such as the rising demand for minimally invasive medical procedures and the introduction of innovative products to increase the efficacy of

therapeutic and diagnostic medical procedures. Thus, the increasing number of medical procedures using medical ceramics is expected to drive the global market for medical ceramics during the forecast period.
