## Abstracts

According to our (Global Info Research) latest study, the global Ceramic Composite Resistor market size was valued at USD 406.9 million in 2023 and is forecast to a readjusted size of USD 670.2 million by 2030 with a CAGR of 7.4% during review period.

Ceramic Composite Resistors consist of a mixture of finely ground insulators and conductors, compressed into a cylindrical shape. Connect the terminals and apply an insulating coating to the outer body of the resistor. Resistance is controlled by the ratio of insulator to conductor mixture.

Ceramic Composite Resistors consist of a mixture of finely ground insulators and conductors, compressed into a cylindrical shape. Connect the terminals and apply an insulating coating to the outer body of the resistor. Resistance is controlled by the ratio of insulator to conductor mixture. Ceramics are excellent electrical insulators as well as excellent thermal conductors. This property of ceramics allows the core of these resistors to withstand low to moderate power currents flowing through them without overheating and damage. By their nature, ceramic resistors are also very chemically inert. The uses of ceramics are not limited to the internal components of resistors. Ceramic insulation and thermal properties will insulate and maintain greater heat resistance on the outside than many other types of resistors. The top five manufacturers of ceramic composite resistors are KOA Corporation, Ohmite, Te Connectivity, Vishay, and Vikingcor, which together account for about 40%. There are different product types of ceramic composite resistors, among which the category of ceramic composite resistors below 5W occupies the first market segment, accounting for 41.57%. The top three application fields of ceramic composite resistors are industrial, medical, and

communication, accounting for 18.3%, 14.78%, and 14.68% respectively.
