According to our (Global Info Research) latest study, the global Ceramic Diaphragm Pressure Sensor market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Ceramic Diaphragm Pressure Sensor is a sensor that uses a diaphragm made of ceramic material for pressure detection. Its structure is generally composed of ceramic diaphragm, deformable body, sensor chip and wiring. Under the action of force, the ceramic diaphragm undergoes slight deformation, which causes the deformation body to displace, thereby generating an electrical signal output. The sensor has the advantages of high precision, high stability, and strong anti-interference, and is suitable for pressure measurement in harsh environments such as temperature and corrosiveness.
