## Abstracts

The global Ceramic Diaphragm Pressure Sensor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Ceramic Diaphragm Pressure Sensor is a sensor that uses a diaphragm made of ceramic material for pressure detection. Its structure is generally composed of ceramic diaphragm, deformable body, sensor chip and wiring. Under the action of force, the ceramic diaphragm undergoes slight deformation, which causes the deformation body to displace, thereby generating an electrical signal output. The sensor has the advantages of high precision, high stability, and strong anti-interference, and is suitable for pressure measurement in harsh environments such as temperature and corrosiveness.

This report studies the global Ceramic Diaphragm Pressure Sensor production, demand, key manufacturers, and key regions.
