According to our (Global Info Research) latest study, the global Ceramic Encapsulated Cement Resistor market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Ceramic encapsulated cement resistors are widely used in electronic circuits due to their high power processing ability, excellent stability, and reliability. It is made by mixing ceramic powder with cement adhesive and then shaping it into a cylindrical shape. Then insert the resistor element into the ceramic body, and coat the entire component with a protective material, usually epoxy or silicone, to prevent damage caused by moisture and mechanical stress. Ceramic encapsulated cement resistors are designed to dissipate the heat generated by current passing through them, which is why they are often used in high-power applications such as power supplies, amplifiers, and motor controllers. Its high thermal conductivity and low coefficient of thermal expansion make it an ideal choice for applications requiring stable resistance values over a wide temperature range.
