Abstracts

The global Ceramic Encapsulated Cement Resistor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Ceramic encapsulated cement resistors are widely used in electronic circuits due to their high power processing ability, excellent stability, and reliability. It is made by mixing ceramic powder with cement adhesive and then shaping it into a cylindrical shape. Then insert the resistor element into the ceramic body, and coat the entire component with a protective material, usually epoxy or silicone, to prevent damage caused by moisture and mechanical stress. Ceramic encapsulated cement resistors are designed to dissipate the heat generated by current passing through them, which is why they are often used in high-power applications such as power supplies, amplifiers, and motor controllers. Its high thermal conductivity and low coefficient of thermal expansion make it an ideal choice for applications requiring stable resistance values over a wide temperature range.

This report studies the global Ceramic Encapsulated Cement Resistor production, demand, key manufacturers, and key regions.
